

BOPO Frame - 'easy version'

Designed to meet the strenuous demands of the modern day office, this frame has been produced specifically for the UK market.

The welded legs can be quickly and easily attached to the telescopic beam by using only eight bolts, creating an extremely sturdy and stylish frame.

With a choice of covers and two different styles of feet, customers can personalise their frame whilst using standard parts at very competitive prices.

Three different lengths of feet (480, 570 and 690mm) are available to accommodate varying widths of desk tops in both cantilever and T frame styles.
